Equal-VJP Adam fit of (u0, v0): F02 vs lawson4_d0.2_unroll4; mean measured fit speedup 52x
Voltage u: mean and 25-75% over 16 cases
RMSE of u(τ) vs true rollout
time τ after the estimated state
Original F02 (diffrax Tsit5, dt 0.02)
Fast Lawson4, dt 0.2
Observation window
Recovery v: mean and 25-75% over 16 cases
RMSE of v(τ) vs true rollout
time τ after the estimated state
Observation loss vs iteration (mean over cases)
observation loss / (N_obs/2) (1 = noise level)
Adam iteration (1 VJP each)
Loss vs wall time (uniform cost per iteration)
observation loss / (N_obs/2) (1 = noise level)
fit wall time [s], excluding compile
